

SURAJ VAGHELA

(425) 951-9745 | suvaghela23@gmail.com | www.linkedin.com/in/suvaghela

EDUCATION

Bachelor of Science in Informatics (Data Science)

Expected: Jun 2027

University of Washington, Seattle, WA

- **Honors and Awards:** Dean's List (2024, 2025, 2026)
- **Relevant Coursework:** Data Structures and Algorithms, Introduction to Machine Learning, Client-Side Development, Intermediate Data Programming, Introduction to AI, Elements of Statistical Methods, Research Methods

WORK EXPERIENCE

Founder

Mar 2026 - Present

ALPHABYTE, Seattle, WA

- Shipped Vouchlist, a full-stack mobile app to the Apple App Store and Google Play Store.
- Built the app with TypeScript, React Native, Expo, Deno, PostgreSQL, and Supabase, using EAS Build and EAS Submit for CI/CD.
- Designed a secure backend with PostgreSQL, row-level security policies, and serverless edge functions, implementing phone-OTP authentication (Twilio Verify & Supabase Auth) and SHA-256 contact hashing for privacy-preserving friend discovery.
- Architected scalable client-side state across 26 screens using 10 React Context providers and TanStack Query, backed by ~20 Supabase tables.
- Applied AI coding agents and LLM harnesses, including Claude Code, Codex, and Gemini, to accelerate system design, implementation, and debugging.

Software Engineer Intern

Jun 2025 - Nov 2025

CloudifyAI Solutions, Inc., Seattle, WA

- Developed and deployed a recommender system trained on 6,000+ historical customer tickets to automatically suggest relevant solutions, improving response times and reducing support team workload.
- Automated customer support workflows in n8n, integrating the recommender model with ticketing systems to deliver solution recommendations directly to customers or support agents.

Machine Learning Research Intern

Aug 2024 - Sep 2024

Tech Mahindra, Redmond, WA

- Researched and documented spiking neural network (SNN) fundamentals — spike-based signaling, temporal and rate coding, and synaptic plasticity (STDP) — within the Makers Lab AI team.
- Authored technical presentations evaluating SNNs as an energy-efficient, event-driven alternative to conventional neural network architectures.

PROJECTS

ModelMarketplace

May 2026 - Present

Next.js, TypeScript, Supabase (Postgres/RLS), Stripe

- Recipient of iStartup Lab Micro-Grant (2026): Awarded by the University of Washington for demonstrated market viability and architectural rigor.
- Created a two-sided ML-model marketplace with four distinct Stripe monetization flows (one-time purchase, recurring lease, live auction, and tiered seller subscriptions), all reconciled through a single idempotent webhook handler.
- Enforced business rules at the database layer using Postgres triggers and row-level security, including per-tier listing quotas, re-list cooldowns, and ownership transfers.
- Integrated Stripe Connect for seller onboarding, with database-level guarantees preventing listings from unconnected accounts.

TECHNICAL SKILLS & CERTIFICATIONS

Programming Languages: Python, Java, SQL, R, JavaScript, TypeScript, HTML, CSS

Frameworks & Libraries: React, React Native, Expo, Scikit-learn, Pandas, NumPy, Firebase, PyTorch, TensorFlow

Tools & Platforms: Cursor, GitHub, Jira, Claude Code, Codex Supabase, PostHog, Sentry, Google Cloud, EAS

Certifications: Generative AI Fundamentals - Machine Learning & AI (Google Cloud)
